Subject: RE: Oak Ridge Update

- **Oak Ridge Reservation (DOE):** EPA is having internal discussions about the EIT-proposed mercury management approach for the EMDF; once agreed on, the mercury management approach will be included in the EMDF ROD. R4 is having discussions with EPA HQ to explain 1) the development of a site specific fish consumption rate for Bear Creek and 2) development of risk based instream water levels for radionuclides vs effluent discharge limits (based on the instream levels per NPDES regs). OSRTI risk assessors have been briefed and understand the site specific risk approach. DOE is expected to submit the revised draft Focused Feasibility Study, including water quality values for radionuclides, on October 21st. SEMD responded to a controlled correspondence from Rev. Hammond; R4 Community Involvement Coordinator had following up discussion with Rev. Hammond.

Subject: Oak Ridge Update

Greetings,

Do we have an update on Oak Ridge? I have included last week's submission. I looked in SAMS to see if there was an update regarding the meeting with the RA/DRA this week, but didn't see it. Thanks.

- **Oak Ridge Reservation (DOE):** On October 6th, EPA submitted comments on the D1 EMDF ROD to DOE. SEMD had several discussions with HQ before the final submittal of comments, but all issues were addressed in the comments. EPA is expecting the revised draft Focused Feasibility Study, including water quality values for radionuclides, on October 21st. Outstanding issues from that meeting will be discussed with the acting RA and DRA next week.

Sincerely,

Jennifer Guillard
